DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear which "replica current" is intended.

Claim 1 recites the limitation "the replica current" in line 6. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 3, 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Teramoto et al. (6,710,659).

Regarding claim 1, Teramoto et al. (Fig. 10) disclose a variable gain amplifier comprising: a first means (Q20-Q23) coupled to differential input (Vin1, Vin2); a second means (Q12-Q19) generate an output current according to a control voltage via VAGC; a

third means (Q24-Q37, Q11, R1-R4), wherein transistors ((Q29, Q30, Q33) and (Q28, Q31, Q32)) form current mirrors; a fourth means (R5, R6) having the functions thereof.

Regarding claim 2, wherein the first means comprises NMOS transistors ((Q20, Q23) and (Q21, Q22)) are connected via resistors (R8, R7), respectively.

Regarding claim 3, wherein the second means (Q12-Q19) comprises NMOS transistors connected between the first means (Q20-Q23) and the fourth means (R5, R6) and the second means (Q12-Q19) controlled by VAGC.

Regarding claim 5, wherein the fourth means are resistors (R5, R6).

Allowable Subject Matter

Claims 4, 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 7-9 are allowed.

Claim 4 calls for, among others, first and second NMOS transistors (N107, N108) and third and fourth NMOS transistors (N105, N106) having the connections and characteristics thereof.

Claim 6 calls for, among others, a schematic of a fourth means comprises a PMOS transistor, a NMOS transistor, a capacitor and a current source having the connection thereof.

Claims 7-9 call for, among others, fifth and sixth transistors (N107, N108), and seventh and eighth transistors (N105, N106) having the connections thereof.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional reference (Twomey (6,657,494)) discloses amplifier having variable gain control.
